UNIFORM INTERPRETATION OF GAS/SOLID ADSORPTION

JÓZSEF TÓTH

Research Laboratory for Mining Chemistry of the Hungarian Academy of Sciences, H-3515 Miskolc-Egyetemváros, Hungary

CONTENTS

1. Fundamental thermodynamics 4
   1.1 The Gibbs equation 4
   1.2 Further important thermodynamical functions 7
   1.3 Heats of adsorption 8
   1.4 The differential adsorptive potential 12
2. Fundamentals of the uniform interpretation 15
   2.1 Integral isotherm equations of general validity 15
   2.2 Explicit forms, mathematical and physical properties of the functions $\psi(\Theta)$ and $\psi(p_r)$ 19
   2.3 Conditions for thermodynamical correctness of isotherm equations . . . 27
3. Transformations of the well-known but incorrect isotherm equations into correct relationships 31
   3.1 Basic aim of the uniform interpretation (UI). Transformation of the Langmuir (L) equation 31
   3.2 Transformation of the Freundlich (F) and the generalized Freundlich (GF) equations 40
   3.3 Transformation of the Sips (S) equation 47
   3.4 Transformation of the Jovanovic (J) equation 51
   3.5 Analysis of the Dubinin–Radushkevic (DR) equation 54
   3.6 Transformation of the Fowler–Guggenheim (FG) equation 60
   3.7 Transformation of the Volmer (V) equation 67
   3.8 Transformation of the deBoer–Hill (BH) equation 71
   3.9 The linear forms of the transformed (modified) isotherm equations . . . 77
   3.10 The choice of the appropriate transformed (modified) isotherm equation for describing a measured isotherm 79
4. Derivations of new and correct isotherm equations for monolayer adsorption . 90
   4.1 The Tóth (T) equation 90
   4.2 The Fowler–Guggenheim–Tóth (FGT) equation 96
   4.3 The Volmer–Tóth (VT) equation 101
   4.4 The deBoer–Hill–Tóth (BHT) equation 103
   4.5 Generalized form of the "correct" isotherm equations 107
   4.6 Practical applications 111

5. The applicability of the T equation instead of HLR Isotherms of Type I 115
5.1 The general interpretation of power m 115
5.2 Substitution of HLR equations by the T equation 117
5.3 Practical and theoretical applications 122
6. New interpretation, correctness and practical application of the known isotherm equations for multilayer adsorption 128
6.1 The BET equation as a sum of isotherms Type I and III 128
6.2 Modification of the BET equation for multilayer adsorption which is not similar to condensation 133
6.3 Modification of the BET equation for multilayer adsorption with a monolayer domain 135
6.4 Modification of the BET equation for multilayer adsorption with $k_t \neq 1$ and $p_{r,e} \neq 0$ 139
6.5 Interpretation of the original and modified BET equations by the functions $\psi(p_r)$ 140
6.6 The Harkins–Jura (HJ) equation 146
7. Interpretation, correctness and practical application of a new model and new isotherm equations for multilayer adsorption 148
7.1 Why a new model for multilayer adsorption is needed 148
7.2 Fundamentals of the cloud (C) model [28] 149
7.3 Similarities and differences between the BET and the cloud (C) model 151
7.4 The C model with different monolayer isotherm equation 152
7.5 The C model with the T equation 158
7.6 The general form of functions $\psi_{XM}(p_r)$ 163
8. Calculations of the specific surface areas with help of the correct isotherm equations 165
8.1 The importance and meaning of the specific surface area 165
8.2 Calculation of the specific surface area from isotherms Type I with multilayer plateau 166
8.3 Calculation of the specific surface area from isotherms Type I without multilayer plateau 170
8.4 Possible errors in calculation of the specific surface area applying the BET model 179
8.5 Possibilities for calculation of the specific surface area from isotherms Type II 181
8.6 Calculation of the specific surface area from isotherm Type II with monolayer domain 182
8.7 Calculation of the specific surface area from isotherms Type II without monolayer domain 191
8.8 Summarizing statements referring to the calculations of the specific surface area 195
9. Theorem of referable states 196
9.1 State equations of the solid/gas interface layers on homogeneous surfaces 196
9.2 State equations of the solid gas interface layers on heterogeneous surfaces 200
9.3. Connections between the theorem of referable states and the uniform interpretation 205
